

Datapolis Workbox: an advanced platform for business process creation and management

Datapolis Workbox is a useful tool for defining the flow of simple documents like invoices, absences, sick leaves or business trip settlements. It also enables more complex workflow modeling of business process. Using Windows Workflows Foundation you arrange workflow states into a process model in an efficient and simple way.

Product specifications

Designed for managers or consultants familiar with company business processes, Datapolis Workbox offers an answer to corporate users' needs. Managers can easily define and implement workflows. No technical knowledge is required. Processes are represented in flowcharts you built with a graphical designer.

Business process validation – visibility

No matter how complicated, each Workflow business process is neatly displayed as a chart. Validation becomes easy for the manager while charts are self-explanatory to the user.

Graphical designer – no programming required

You don't need any specific technical knowledge to create/add a new business process. A basic knowledge of SharePoint and workflow patterns will be enough. Workflows are based on workflow states, as in Windows Workflow Foundation. Complex non-sequential business processes can be created intuitively.

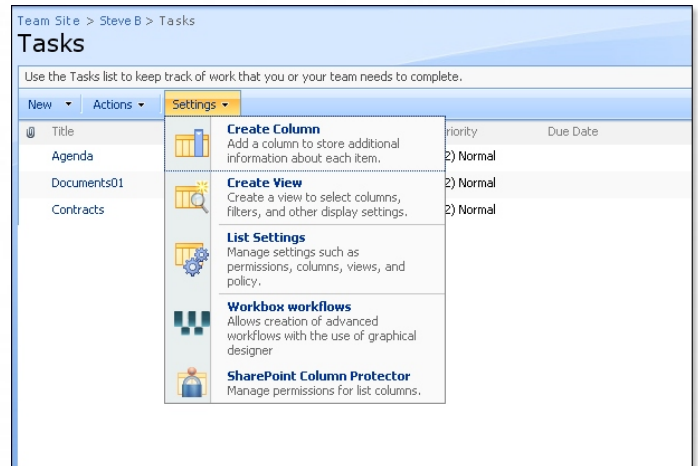

Full integration with Microsoft SharePoint™

Workbox is fully integrated with Microsoft SharePoint platform. Processes are either launched directly from SharePoint lists or start automatically when a new element appears.

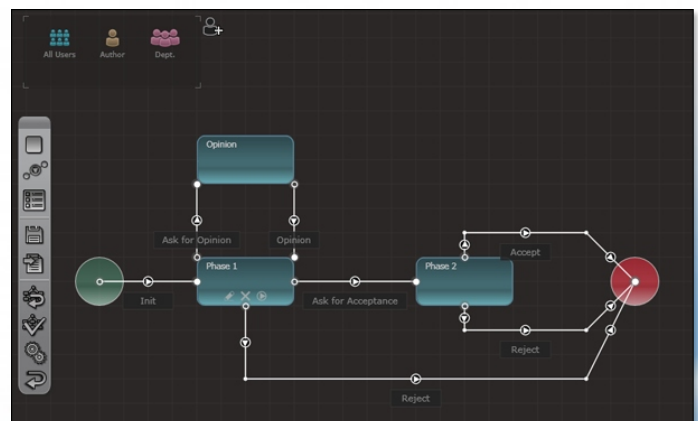

Scalability – flexibility – open architecture

With Datapolis Workbox you can efficiently create:

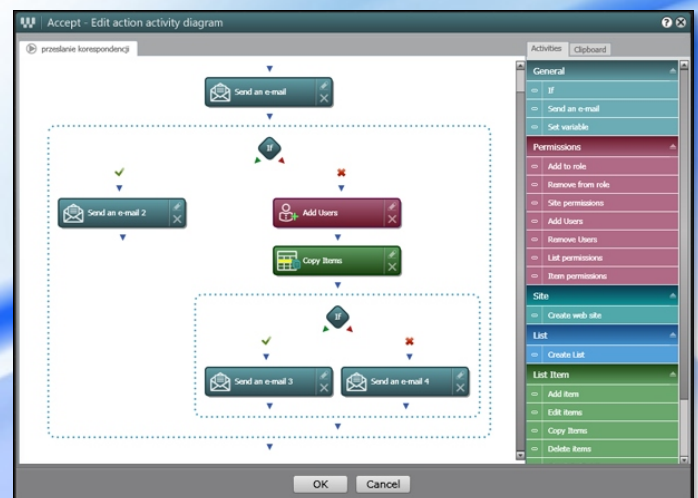

- new functionalities of Datapolis Workbox, as needed,
- connectors to other systems (ERP, CRM, SAP, external databases etc.).

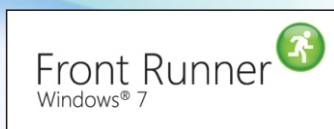

Create a workflow from SharePoint list

Graphical designer: states and actions

Graphical designer: activities

Software

- Windows SharePoint Services 3.0
- Microsoft Office SharePoint Server 2007
- Silverlight 2.0

Size of the company

Middle to big-sized companies

Branch and activities

Any kind of business

Automate business processes with Datapolis Workbox

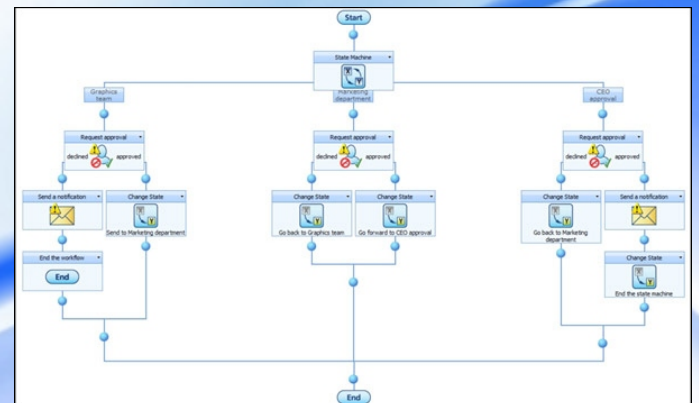

Datapolis Workbox is distinguished by its unique operational philosophy which, thanks to the use of state workflows, mirrors the way people take decisions and allows for far-reaching process customization.

Tri-state flow created by Datapolis Workbox indicates philosophy and opportunities in the application which is based on philosophy of state workflows.

Activity layer in a legible way allows to define actions which are taken in case of making particular decisions at the specific state.

The same workflow created in the solution which is based on a sequential workflows. Level of complexity grows rapidly along with the amount of states and transitions.
